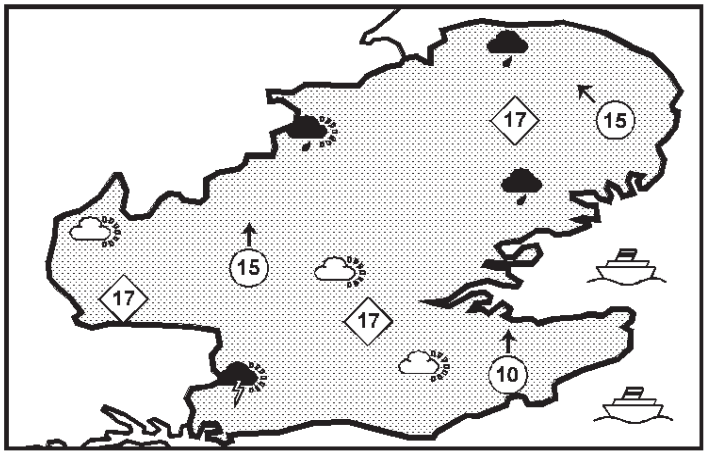
South East 10-day Outlook

don't guess
weathercall

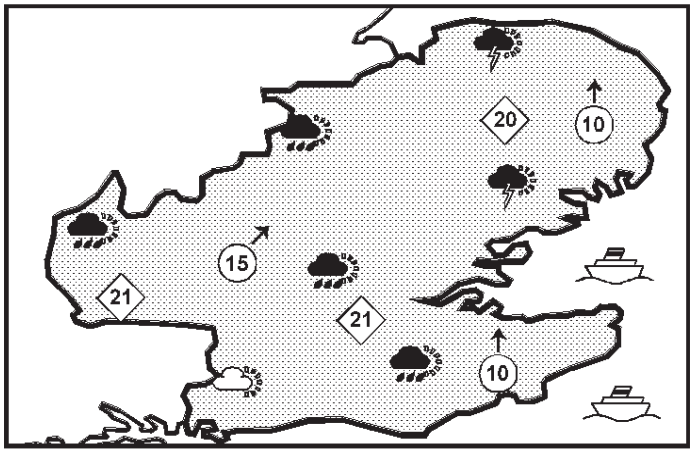
This is the forecast for today and the following nine days
Issued at 0630 on 23 Aug 2004

This morning and afternoon



For many parts, especially over counties to the north and east of London, it will be a cloudy and wet start to the day with outbreaks of sometimes heavy rain. During the morning though brighter but showery conditions will replace the rain. The showers will become heavy at times and perhaps thundery, however the South Coast perhaps even Kent and Essex, may benefit from some drier and sunnier breaks. Winds will start moderate and southeasterly, but will increase during the morning to a moderate or fresh south to southwesterly of 15 to 20mph, but with gusts whipping up to around 30 or 35mph near the showers. In any sunshine 21 or 22 may be possible in Central London, but values will struggle to 19 in Brighton.

This evening and night



Some parts will end the day on a fine and dry note, but some thunderstorms are likely to rumble on into the night, especially across southern counties. Winds will stay south to southwest easing to a gentle to moderate breeze of 10 to 15mph, although they will remain quite gusty around the showers. Lows dipping to 14 Celsius under clearer skies.

Tuesday

Another showery day is expected on Tuesday, the showers often heavy with thunder. Not everywhere will catch them though, and for a few places there will be some good sunny periods. Afternoon temperatures will peak at 23 Celsius, with winds a moderate to fresh southwesterly, 15 to 20mph with gusts up to 35mph. Overnight, winds will turn to a moderate westerly of 15mph, and whilst a few showers may linger for a time, most parts will become dry with clear periods by morning. Lowest temperatures will dip to 13 degrees.

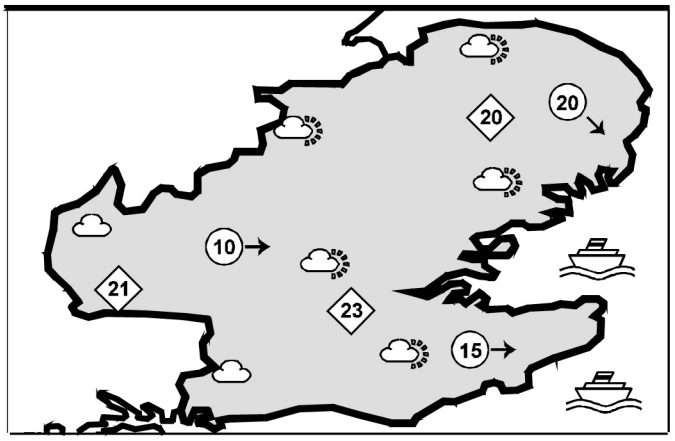
South East
10-day Outlook

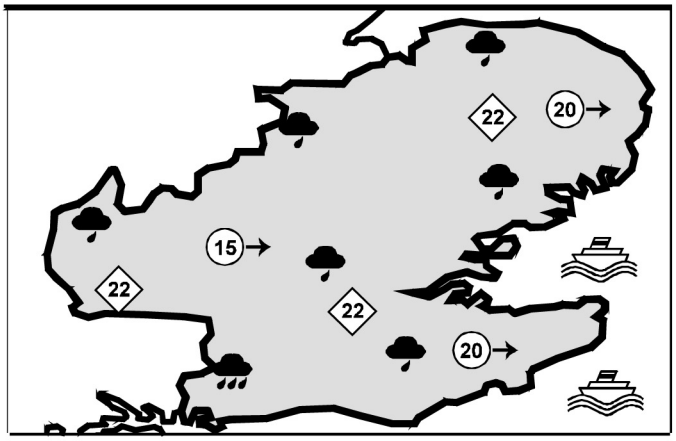
don't guess
weathercall

Thursday

A better day is promised on Thursday, staying mostly dry, although the odd light shower still cannot be ruled out. Unfortunately winds will stay moderate to fresh west-northwesterly, and this will take the edge off an otherwise fine day, with temperatures peaking at 23 degrees in the afternoon sunshine. All the while though cloud will be increasing from the west, and this will bring rain through the evening and night. Lows will hold at 14 Celsius, with winds backing to a moderate southwesterly.



Friday



It will be wet and windy through much of Friday, the rain heavy and persistent at times and with strong southwesterly winds adding to give a poor day. Local gales may develop along English Channel coasts. Clearer, drier conditions may push into the north during the evening, but it is really overnight that the rain will clear south from all parts, with winds easing to a lighter northerly. Daytime highs may reach 21 Celsius in any drier interludes, dropping back to just 9 degrees overnight.

Saturday

It will be a cool, but dry start to the weekend, with mostly sunny skies, and with light or gentle north to northwesterly breezes. In sheltered southern areas highs may reach 22 Celsius, but overnight it will turn chilly again with colder spots falling to 8 degrees, perhaps even a touch lower.

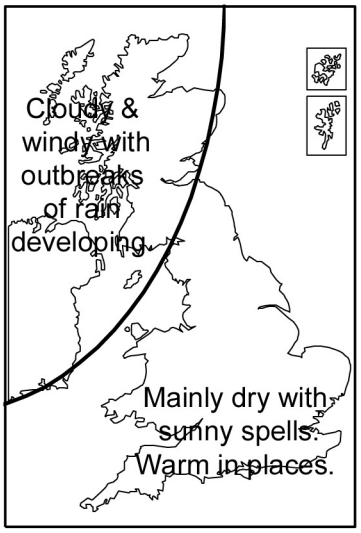
- Slight
- Moderate
- Rough
- Very rough

Sunday

Mostly dry with sunny spells but cloud increasing and thickening in the northwest with outbreaks of rain developing, accompanied by fresh to strong winds.

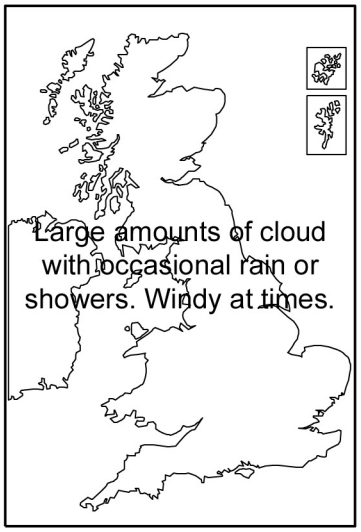
Temperatures: mainly near normal, locally warm in parts of the SE.



Monday

Largely cloudy with showers or more prolonged spells of rain – these heaviest in the northwest with perhaps some bright or sunny spells in the southeast at times. Windy.

Temperatures: Mainly near normal but feeling cooler in the wind.



and the following 3 days...

Area A: Variable, often large amounts of cloud with some rain or showers interspersed by drier, brighter interludes – the best of these in the southeast. Windy at times in the north and breezy further south. Temperatures near normal, occasionally warm in the SE.
